
centre profile F(τ) = √(D−2) ∂p/∂x at r = 0
its first harmonic alone (a pure sine)
D = 4
Δ = 3.445: each echo e^Δ = 31.4× smaller; third harmonic 44% of the first; peak F = 19.08
D = 10
Δ = 2.521: each echo e^Δ = 12.4× smaller; third harmonic 21% of the first; peak F = 3.83
D = 20.04
Δ = 2.111: each echo e^Δ = 8.3× smaller; third harmonic 13% of the first; peak F = 3.10
D = 60.00
Δ = 1.810: each echo e^Δ = 6.1× smaller; third harmonic 8% of the first; peak F = 2.75
