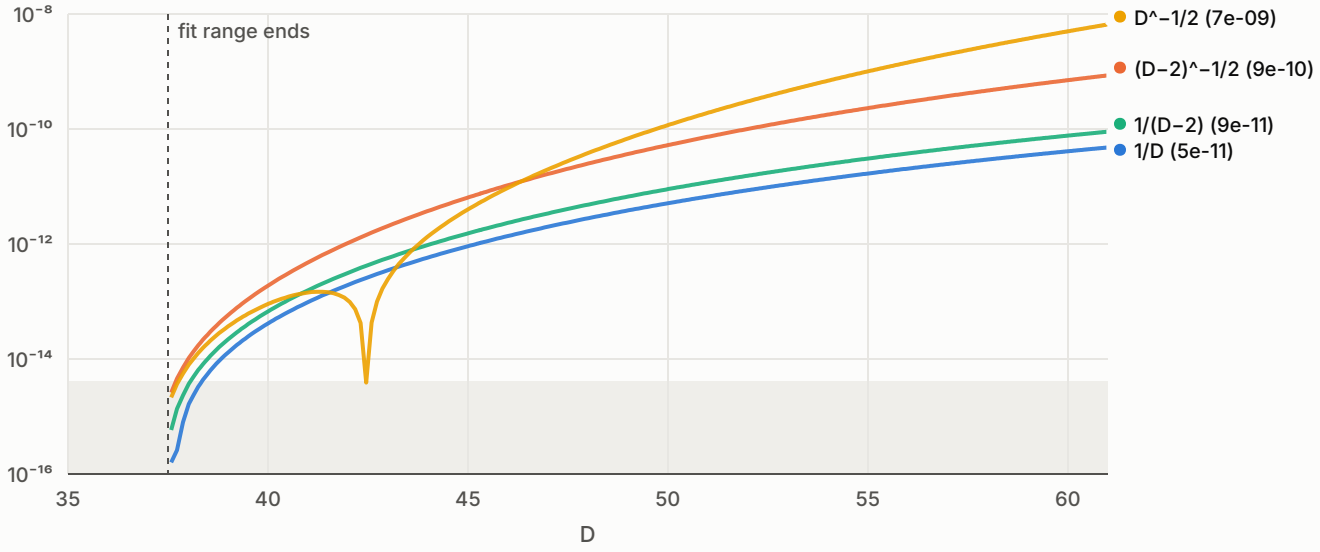
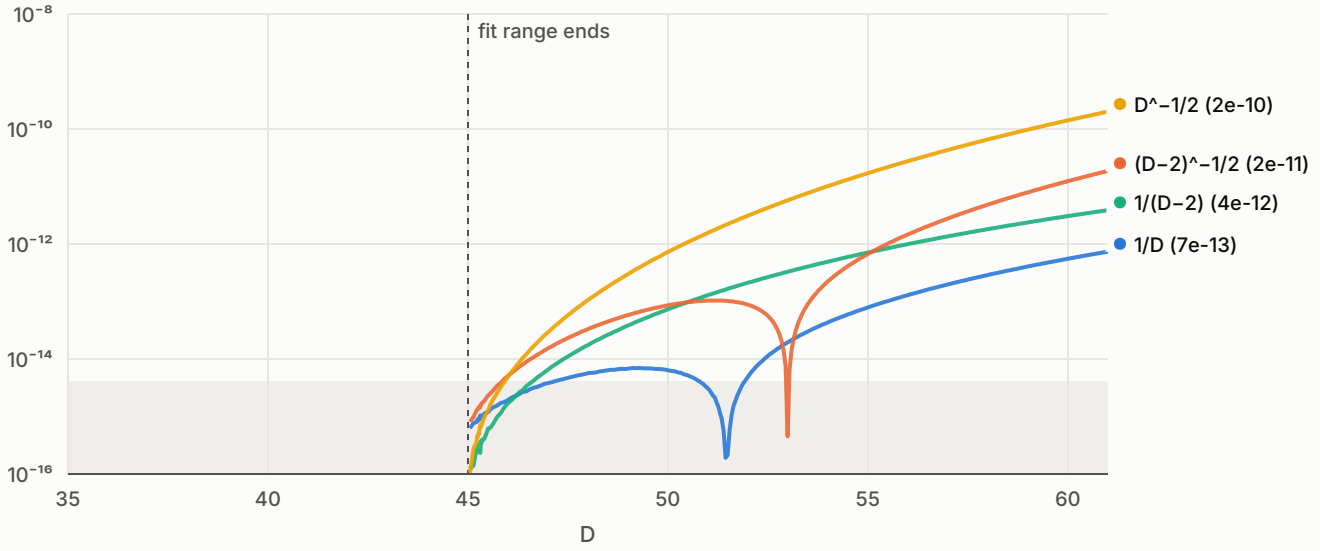
Predicting double-double points the fits never saw (computed up to D = 61.0)

|model − computed Δ| on every point above the fitted range; shaded: the level of the points

Fitted on 10 ≤ D ≤ 37.5 (279 points), compared with 517 points above



Fitted on 10 ≤ D ≤ 45 (352 points), compared with 444 points above



power series in 1/D, degree 16 (analytic in 1/D)

power series in 1/(D−2), degree 18 (analytic in 1/D)

power series in (D−2)^−1/2, degree 20

power series in D^−1/2, degree 20
